Dear Mr. Bicas,

The egg, milk, peanut and gluten testing of the hard candy samples we received Tuesday, May 8, 2007 has been completed. The results are listed below.

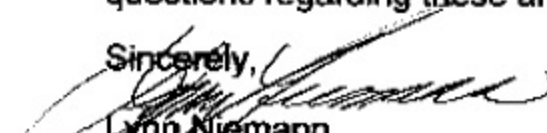

<u>Sample Identification</u>	<u>Egg</u>	<u>Gluten</u>	<u>Milk</u>	<u>Peanut</u>
5/1/07, Organic hard candy, Lemon	BLD*	BLD	BLD	BLD
5/1/07, Organic hard candy, Peppermint	BLD	BLD	BLD	BLD

BLD* - Below the limit of detection. The lower limit of detection of the Neogen Veratox® Quantitative Egg Allergen Test (specific for egg white), the Neogen Veratox® Total Milk Allergen Quantitative Test and also the Neogen Veratox® Quantitative Peanut Allergen Test is 2.5 parts per million (ppm). The lower limit of detection for the R-Biopharm RIDASCREEN® FAST Gliadin is 10 ppm gluten. Amounts below these levels cannot be reliably detected in these assays. The R-Biopharm RIDASCREEN® FAST Gliadin is equally cross-reactive with gliadin/gluten for wheat, rye, and barley. One ppm is equal to one milligram of egg, gluten, milk or peanut per one kilogram of sample product.

IMPORTANT NOTE: If the possible source of allergen contamination in your samples is from fermentation, or consists of fermented or hydrolyzed materials, current test methods cannot measure allergen levels appropriately in these cases. This can result in a severe underestimate of the allergen content of your samples. In these special cases, a BLD reading may be indicated but there still could be enough allergenic residues left over to be capable of causing an allergic reaction. If your sample is of this type, please contact the FARRP laboratory at 402-472-4484 for further assistance.

Please contact Dr. Steve Taylor at 402-472-2833 or by email at staylor2@unl.edu if you have any questions regarding these analyses.

Sincerely,

Lynn Niemann
Research Technologist
